

Success Story:

SIS-TECH ICE Group
Provides Focus and
Drives Results

Instrumentation Controls & Electrical- ICE

In 2014, a Gulf Coast chemical company was installing a safety instrumented system (SIS) during a turnaround.

This was a new installation on an existing unit; the project was behind schedule; and people were rushing, trying to make changes and fix things in the field. SIS-TECH was contracted to help.

SIS-TECH personnel reviewed the SIS Logic and made recommendations; reviewed and changed documentation, interlock proof-test procedures; red-lined P&IDs; worked the control board, testing and troubleshooting instrumentation.

Utilizing the SIS-TECH ICE Group helped resolve problems with the project:

- Expertise to focus on trouble shooting
- Experience managing projects
- Reduced turnaround time
- Self directed
- Drives results
- Each phase of project work is done right
